

Third-Party Risk Management Services

Overview

A typical health system has 3,000 to 5,000 vendors involved in care delivery or healthcare operations, and most assess fewer than 5% per year. Many TPRM programs aren't built to operate at the scale, speed, or depth the risk requires.

Cybersecurity incidents involving third parties have wide-ranging impacts including patient safety, operational disruption, regulatory exposure, and reputational harm.

Meditology's TPRM services help healthcare organizations design, build, and continuously operate vendor risk programs that match their maturity, scale to their vendor population, and integrate directly into their governance environment.

Our TPRM Services

TPRM Maturity Assessment

Every engagement starts here. We evaluate your current program, vendor inventory, workflows, GRC environment, and regulatory alignment to determine exactly how to engage.

Program Strategy

We design your TPRM governance framework: risk tiers, policies, regulatory alignment to HIPAA, HITRUST, and NIST, and a maturity roadmap tailored to your organization's risk appetite.

Program Enablement

We operationalize your program through GRC integration, tool configuration, intake process design, initial risk profiling, and team training to drive consistency and coverage from day one.

Operational Support

We manage the full assessment lifecycle on your behalf, including proactive vendor outreach, questionnaire management, evidence review, remediation tracking, and quarterly executive reporting.

Program Outcomes

A TPRM program

designed for your maturity, not a generic framework.

Risk reporting

tied to business and care delivery impact, not just a score.

Scalable capacity

that absorbs volume spikes without quality loss.

Proactive assessment execution:

we drive the velocity on your behalf.

Remediation planning

with vendor accountability tracked to closure.

Governance reporting

integrated into your enterprise risk register.

Why Meditology

Healthcare-exclusive

We serve healthcare only, with deep knowledge of EHR, clinical, revenue cycle, and device vendors.

CORL Cleared Vendor Directory

Proprietary vendor intelligence that accelerates assessments and improves data quality at scale.

Strategy + operations in one team

The advisors who design your program are the ones who operate it, so nothing is lost between design and execution.

Flexible engagement models

Fully outsourced, co-managed, staff augmentation, or advisory: we fit your operating model.

About Meditology

Meditology helps healthcare organizations turn cybersecurity, risk, and compliance into a strategic advantage, integrating deep healthcare expertise, end-to-end delivery, and tailored solutions to increase operational resilience and business value.
